File: \NOAA\Resonon\doc\Aux_data_via_LabJack_for_MOBY-Refresh.pptx & .pdf
Date: 06-May-2016, By: MF/MLML (rev: 12May2016)
What: Auxiliary data collection via LabJack U6 USB DAQ for MOBY-Refresh instruments.

In May-2016 MF moved the acquisition of MOBY-Refresh auxiliary data to a LabJack U6 USB DAQ (see **Fig. 1**) This was done to free-up the SLM's DVM and simplify my wiring mess, and because the MOBY-Refresh instruments will employ internal U6 DAQs for control and acquisition.

The U6 5 Vdc power source (supplied via USB cable connection) is used to supply voltage-divider input for 5x thermistors for temperature measurements, and 2x humidity sensors for %RH measurements. The Resonon instruments have 3x internal temperature sensors and 1x internal humidity sensor (**Fig. 2-5**). An external %RH + °C sensor (see **Fig. 6**) monitors ambient conditions, and another external thermistor is available to attach to another device – ex. Fiber splitter (**Fig. 7**). There are 2x not-used channels wired and available in the U6 connector box for future use.

For now, data acquisition is via commercial LabJack software: LJLogUD V1.19 (Windows only).

<u>The auxiliary data measured / logged are:</u>
Chan 01 = 5 Vdc Supply (Vdc) [LabJack U6 via USB]
Chan 02 = Internal Slit Thermistor (Vdc) [US Sensors PT103J2]
Chan 03 = Internal Near-camera Thermistor (Vdc) [US Sensors PT103J2]
Chan 04 = Internal Under-cap Thermistor (Vdc) [US Sensors PT103J2]
Chan 05 = Ambient Thermistor (Vdc) [Meas. Spec. HTM2500LF, S/N: 122702-37]
Chan 06 = External Thermistor (Vdc) [Cantherm CWF4B103G3380]
Chan 07 = NA (Vdc)
Chan 08 = NA (Vdc)
Chan 09 = Internal Humidity Sensor (Vdc) [Honeywell HIH-5030]
Chan 10 = Ambient Humidity Sensor (Vdc) [Meas. Spec. HTM2500LF, S/N: 122702-37]

All thermistors are wired in resistive voltage divider circuits, following the equation:

Vout = Vin * (R2 / (R1 + R2)), where
Vout = measured output Voltage across the 10 kΩ NTC thermistor (i.e. temperature probe)
Vin = input supply voltage, measured as Chan 1
R1 = NTC resistance (Ohm), nominal 10 kΩ at 25°C
R2 = batch resistance (Ohm), 10 kΩ ± 0.1%, 5 ppm temp. coef. PTF5610K000BZEB (see **Fig. 8**)

So that the unknown NTC resistance can be solved from the above equation as:
R1 = R2 * ((Vin / Vout) – 1)

LJLogUD logging software saves tab-delimited ASCII *.dat files, were the first column is a time stamp of seconds since midnight January 1st (Universal Time), 1904. The next 10 columns are the 10 channels of Vdc data listed above.

LabJack U6-PRO

Multifunction DAQ - USB

The U6 incorporates a wide range of features including our highest performance 24-bit analog inputs with on-board instrumentation amplifier.

$369

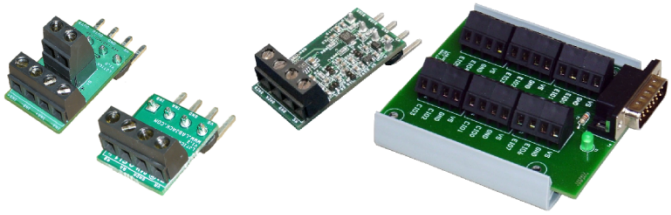
labjack.com/u6

I/O Features

- Analog input resolution as low as **1µV noise-free**
- Analog input ranges: ±10V, ±1V, ±0.1V and ±0.01V
- Expand to **84 analog inputs** with $150 add-on
- 16-bit high-speed ADC (up to 50kHz)
- **24-bit** low-speed ADC
- 14 analog inputs built-in
- 20 digital I/O
- Watchdog system
- Up to 2 counters
- 2 analog outputs (12-bit, 0-5V)
- Serial protocols: SPI, I2C, and more ...
- Up to 4 PWM, quadrature, pulse width, and more ...
- Thermocouples, load cells, bridges, and more ...
- Industrial temperature range (-40 to 85°C)

Other Highlights

- Each purchase includes **lifetime support**
- **Free applications** to configure, test, and log data to file
- Free examples: **C/C++**, **C#**, **Delphi**, **Java**, **LabVIEW**, **Matlab**, **Python**, **VB.NET** and more...
- Free UD Library - Wraps the low-level protocol and USB driver layer for ease-of-use
- Expansion boards - Add ±10V DACs, 4-20 mA inputs, terminal boards, relay boards and more...



"I really do love your products ... They are first class for coach price, and your customer service is what every company should aspire to have."

-Brad
Neuro-Test Inc

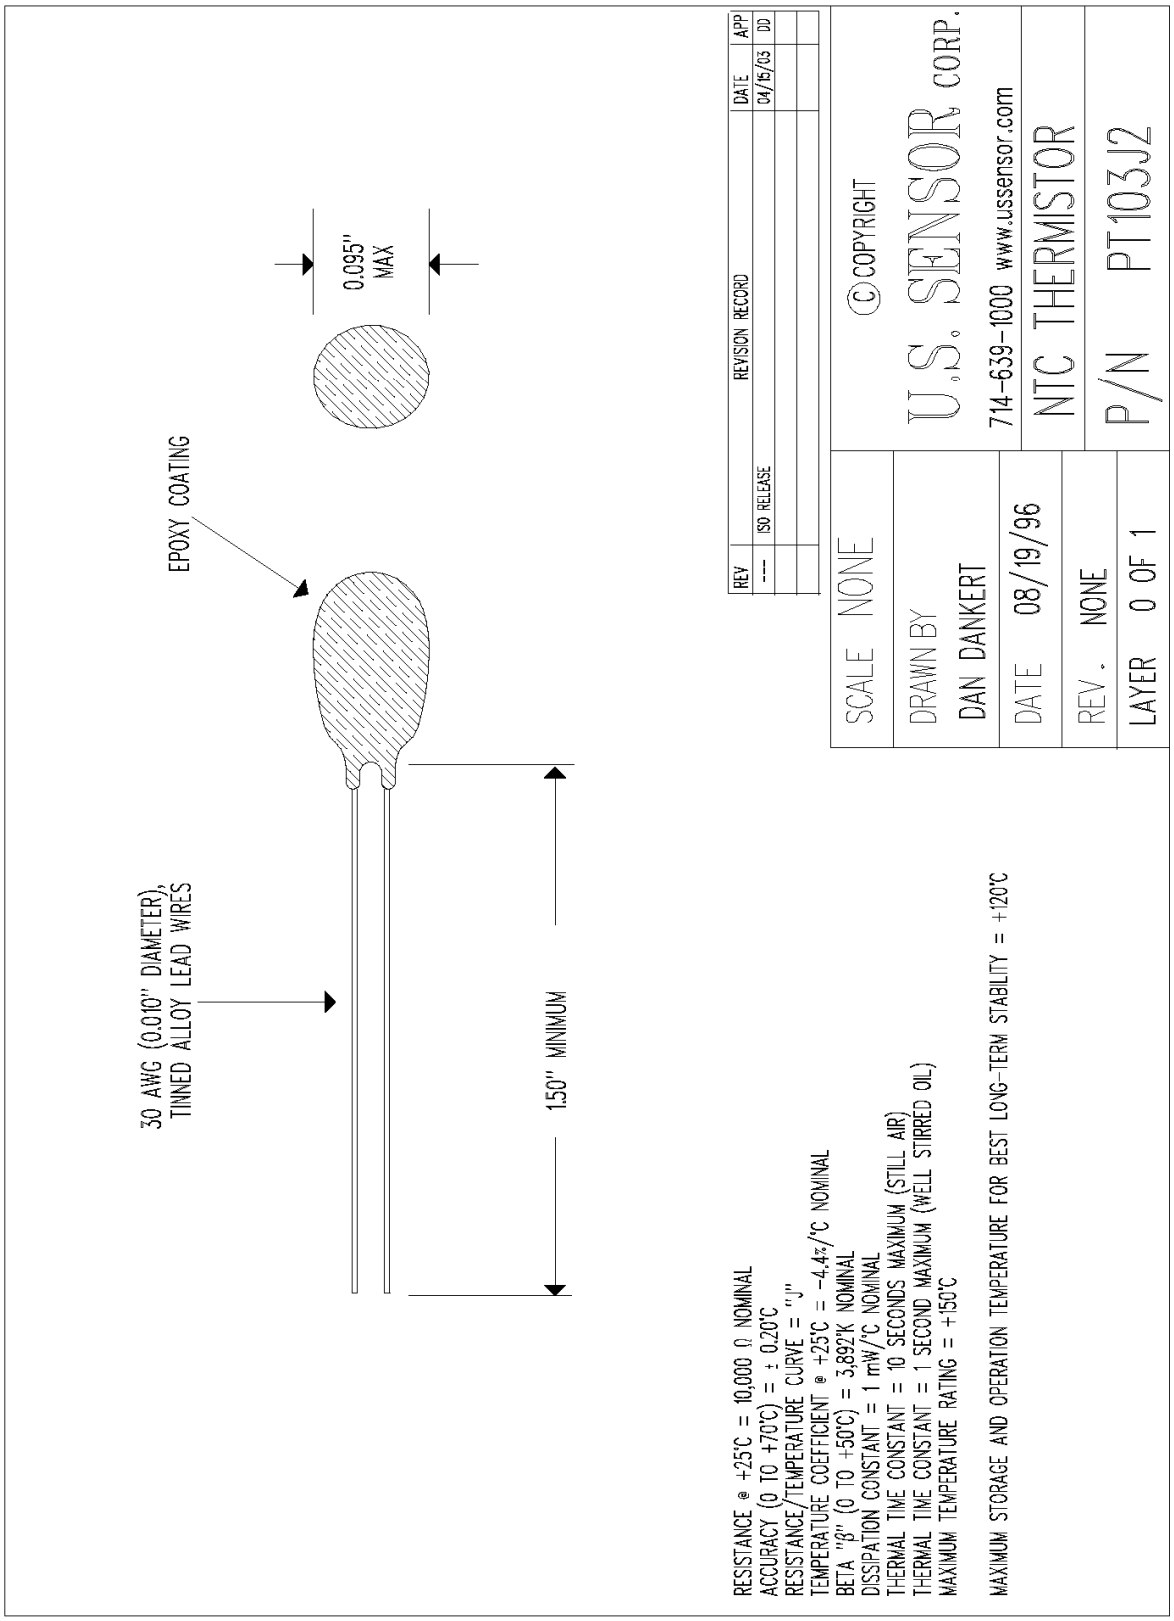

Figure 3, Specifications for Internal Resonon thermistors = DigiKey part # 615-1010-ND / US Sensor PT103J2

Table 1. Performance Specifications (At 3.3 Vdc supply and 25 °C [77 °F] unless otherwise noted.)

Parameter	Minimum	Typical	Maximum	Unit	Specific Note
Interchangeability (first order curve)					
0 % RH to 10 % RH, 90 % RH to 100 % RH	-7	–	7	% RH	–
11 % RH to 89 % RH	-3	–	3	% RH	
Accuracy (best fit straight line) 11% RH to 89% RH	-3	–	+3	% RH	4
Hysteresis	–	2	–	% RH	–
Repeatability	–	±0.5	–	% RH	–
Settling time	–	–	70	ms	–
Response time (1/e in slow moving air)	–	5	–	s	–
Stability (at 50% RH in 5 years)	–	±1.2	–	% RH	1
Voltage supply	2.7	–	5.5	Vdc	2
Current supply	–	200	500	µA	–
Voltage output (1st order curve fit)	$V_{OUT}=(V_{SUPPLY})(0.00636(\text{sensor RH}) + 0.1515)$, typical at 25 °C				
Temperature compensation	True RH = (Sensor RH)/(1.0546 – 0.00216T), T in °C				
Output voltage temp. coefficient at 50% RH, 5 V	–	-2	–	mV/°C	–
Operating temperature	-40[-40]	See Figure 2.	85[185]	°C[°F]	–
Operating humidity (HIH-5030)	0	See Figure 2.	100	% RH	3
Operating humidity (HIH-5031)	0	See Figure 2.	100	% RH	–
Storage temperature	-50[-58]	–	125[257]	°C[°F]	–
Storage humidity	See Figure 3.			% RH	3

Specific Notes:

1. Includes stress outside of recommended operating zone.
2. Device is tested at 3.3 Vdc and 25 °C.
3. Non-condensing environment. When liquid water falls on the humidity sensor die, output goes to a low rail condition indicating no humidity.
4. Total accuracy including interchangeability is ±3 %RH.

General Notes:

- Sensor is ratiometric to supply voltage.
- Extended exposure to ≥90 % RH causes a reversible shift of 3 % RH.
- Sensor is light sensitive. For best performance, shield sensor from bright light.

** For temperature upper than 60℃, specific high te mperature cable is required: HTM2500LFL products*

- **Steinhart-Hart coefficients**

According to the equation below, the Steinhart-Hart coefficients for the operating temperature range for HTM2500LF thermistor are:

$$\frac{1}{T} = a + b*\ln(R) + C*\ln(R)*\ln(R)*\ln(R)$$

R	NTC resistance in Ω at temperature T in K
T	Temperature in K
a	Constant value (a = 8.54942E-04)
b	Constant value (b = 2.57305E-04)
c	Constant value (c = 1.65368E-07)

CANTHERM

Supplying high-quality bimetal and thermal sensor products.

Figure 7, Specifications for external thermistor / °C sensor = DigiKey # 317-1385-ND, Cantherm CWF4B103G3380

Metal Film Resistors, High Precision, High Stability

FEATURES

- Extremely low temperature coefficient of resistance
- Very low noise and voltage coefficient
- Very good high frequency characteristics
- Can replace wirewound bobbins
- Proprietary epoxy coating provides superior moisture protection
- For surface mount product, see Vishay Dale's PSF datasheet
- Compliant to RoHS Directive 2002/95/EC
